10.5HANDY

HANDY 10,5 MM

The Handy 10.5 mm is a versatile semi-static rope designed for rope access work in dry environments and wind farms, where smooth handling and stable performance during repetitive tasks are essential. Its medium diameter provides comfortable handling and solid compatibility with devices. It features Classic+ construction with a 48-yarn sheath.

TECHNOLOGY

48-YARN SHEATH

The 48-strand sheath with compact 2x2 braiding improves structural stability and distributes wear more evenly. It reduces internal friction between strands, minimises the risk of glazing and maintains a uniform feel with greater control in devices. Its structure promotes stable handling even after repeated use.

CLASSIC +

The Classic+ sheath braiding facilitates the use of belay and rope devices thanks to the friction generated between the rope and the device. The strands cross each other in pairs to form the rope sheath. The texture of this construction creates controlled friction with devices, allowing for slower and more controlled handling.

NATURE

Nature ropes do not include a water-repellent treatment. They are not designed to repel water absorption, so their use is recommended in dry environments. They stand out for their flexibility and ease of handling, providing smooth behaviour both when tying knots and during belay or rope manoeuvres.

DIAMETER 10.5 MM

A balanced diameter that offers an optimal combination of control, handling and compatibility with rope devices. It enables smooth handling during long ascents and repetitive manoeuvres, maintaining reliable performance in vertical work with continuous use.

RECOMMENDED USES

Dry rope access Excellent Wind farms Excellent Wet rope access Good Rescue Good Arboriculture Suitable

Indicative rating based on behaviour and compatibility in each application.

Handy. Built on the experience of previous generations

COLOURS AND LENGTHS

Available lengths 50 m 100 m 200 m 600 m Colours available in all lengths White · Blue · Black · Red Choose the right rope for every activity The full range, in detail

TECHNICAL INFORMATION

- Number of falls: 18

- Weight: 70.5 g/m
- Impact force: 4.8 kN
- Sheath slippage: 0.0 %
- Static elongation: 4.0 %
- Static strength: 30.8 kN
- Sheath proportion: 37.6 %
- Flexibility (knotability): 0.9
- Knot strength: 20 kN
- Shrinkage in water: 3.0 %
- Material: Polyamide
