

With a breaking load of 25 kN and numerous certifications including EN and ANSI, the Thor is the strongest openable ring on the market.

The tapered interlocking closure with a threaded pin is very easy to use and delivers a very high level of safety.

The circular shape provides full strength in all directions.

The body is forged from aluminum alloy and the closure with the threaded pin is constructed from stainless steel.

The surface around the entirety of the ring (even where it opens and closes) is incredibly smooth and precise for smooth integrations with ropes, slings, and devices.

The 14 mm opening is big enough to connect a large variety of components.

The locking pin is equipped with a rubber O-ring that makes the connection safe from vibrations and dynamic loads.

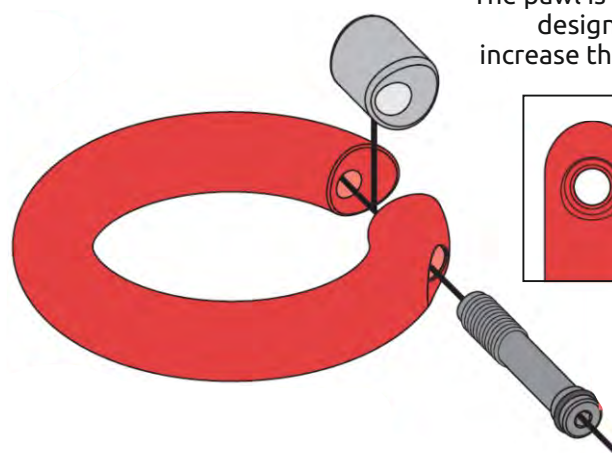

2.5 mm Allen key included in the package.
